

ABT 790 CAPSTONE PROJECT OVERVIEW

The ABT 790 Capstone Course is an opportunity to lead a project in a real-world setting, and gain valuable experience, by applying what you've learned in the Master of Science in Applied Biotechnology curriculum.

It is not an internship; rather, students serve in a consultant role with a partner organization by identifying a need and crafting a proposal for implementation based on research and best practices. Students will build relationships with stakeholders at the partner site to address their question successfully. Plan on spending approximately 100 hours (7 hours per week) over the semester.
