

## Spring 2027

**Registration Opens:** November 09, 2026

**Course Preview Week:** January 19 - January 25, 2027

**Semester Dates:** January 26 - May 07, 2027

### **SMGT 700 Cultural and Historical Foundations of Sustainability** **3 Credits**

In this course, you will investigate the changing relationships of humans to the natural environment, changes in dominant scientific perspectives, and the process of scientific debate. Explore the quest for understanding, manipulating, and dominating the natural world. And learn about cultural and organizational structures, the role and impact of technology, the systems approach to problem solving, and their implications for the future.

### **SMGT 786 Climate Change** **3 Credits**

In this course, you will explore climate change through scientific, humanistic, and sustainability frameworks. After building a strong foundation in the causes, impacts, and study of climate change, you will apply this understanding to evaluate scientific communication, environmental justice and vulnerability, and environmental policy to find solutions and strategies to address anthropogenic climate change.
